SUMMARY

Detail-oriented final-year Computer Science Engineering student specializing in Java and Spring Boot backend development. Proven ability to architect secure REST APIs, optimize database schemas, and deliver clean, scalable code. Gained hands-on enterprise software experience at Bharat Electronics Limited (BEL). Certified in Java and Problem Solving by HackerRank with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming.

TECHNICAL SKILLS

Languages: Java, SQL, PHP, JavaScript, HTML5, CSS3
Frameworks & APIs: Spring Boot, Spring Security, Spring Data JPA, Hibernate, RESTful APIs
Security & Database: JWT Authentication, Role-Based Access Control (RBAC), MySQL, Schema Design
Cloud & Tools: AWS (EC2, S3, IAM), Git, GitHub, Maven, Postman, Linux, IntelliJ IDEA
Core Computer Science: Data Structures & Algorithms (DSA), OOP, DBMS, Operating Systems, SDLC

EXPERIENCE

Software Engineering Intern

Aug 2025 – Sep 2025

Bharat Electronics Limited (BEL), Ghaziabad (Defense PSU — Ministry of Defence, India)

- Engineered an algorithmic Monopulse Equation processing module and graphical analysis interface for IFF radar systems, **reducing manual calculation workflows by 40%**.
- Validated backend algorithm outputs against real-world radar signal benchmarks to achieve a **98%+ accuracy rate** in parametric data matching.
- Adhered to defense-grade secure coding standards, rigorous software test planning, and full-lifecycle SDLC documentation practices.

PROJECTS

Job Portal — Hiring Platform Backend *Java, Spring Boot, Spring Security, JWT, MySQL, REST API, Maven* [[GitHub](#)]

- Designed a robust, multi-role RESTful API architecture supporting Job Seekers, Employers, and Admins with comprehensive secure user registration and stateless architecture rules.
- Developed high-performance CRUD endpoints for job tracking and user lifecycle management, validating stability with end-to-end integration tests via Postman.
- Architected a normalized MySQL database schema utilizing strategic indexing and relational mapping via Hibernate/JPA to optimize read-heavy search operations.
- Integrated stateless **JWT Authentication** mechanisms alongside Spring Security to enforce strict, granular Role-Based Access Control (RBAC).

Doctor–Patient Telemedicine Platform

PHP, MySQL, JavaScript, Bootstrap

[[GitHub](#)]

- Created an automated appointment booking backend featuring synchronized, race-condition-free scheduling logic that **reduced slot conflicts by 30%**.
- Protected sensitive patient health data by implementing strict server-side validation and parameterized SQL queries to mitigate OWASP Top 10 vulnerabilities (SQL Injection).

Software Repository & Distribution System

PHP, MySQL, Bootstrap

[[GitHub](#)]

- Programmed a centralized software distribution engine handling file assets, fine-tuned for high concurrency through explicit database indexing and structural query caching.
- Deployed secure administrative dashboards tracking system actions via dedicated, immutable audit logs.

EDUCATION

B.Tech — Computer Science & Engineering

Expected: **July 2026**

Dr. A.P.J. Abdul Kalam Technical University (AKTU)

CGPA: **7.1 / 10.0**

Relevant Coursework: Data Structures & Algorithms, Database Management Systems (DBMS), Operating Systems, Object-Oriented Programming (OOP)

CERTIFICATIONS

- Java (Basic)** — HackerRank 2025 [[Certificate](#)]
- Problem Solving (Basic)** — HackerRank 2025 [[Certificate](#)]
- Responsive Web Design** — freeCodeCamp 2023 [[Certificate](#)]

ACHIEVEMENTS

- 1st Place** — Project Exhibition, Deoria Mahotsav
- 2nd Place** — Engineering Innovation Competition, VGI
- 3rd Place** — Technical Project Hackathon, VGI
